

## Split Screen : INSTALLATION

### Step 1

Unzip the .zip file

### Step 2

Upload the **plugins** file on your server via your FTP client.

In this folder you can find the files allowing to operate the plugins on the site.

*If you already have a « plugins » folder on your server, drop only its content in the plugins file on your server.*

### Step 3

Open the **code propriete de la page.html** file with a code editor such as NotePad or TextWrangler and copy/paste it in the customized html code part of the settings of the page on which you want to display the split screen.

### Step 4

Open the **code element html.html** file with a code editor such as NotePad or TextWrangler and copy/paste it in html element of the page on which you want to display the split screen.

## Customization of the html code

```
<div class="item">
  
</div>
```

If you want to add slides, you just to copy/paste these lines of code one after the other.

### Step 5

## Replace images

To replace images with yours, you must go the img file (plugins => splitScreenText => img) on your server.

We advise to keep the same file name in order to avoid changing the code.

## Step 6

### Advanced customization of the plugin

To customize the split screen even more, open the **style.css** file on your server (plugins => splitScreenText => css)

- Line 71 : change navigation small traits color

To replace displaying of the split screen on sm and xs screens, use masking properties.

If you want to add a menu above the split screen as well as a foot-page, you will have to play with the split screen height value that is in line 14 of the style.css file.
